

## TITLE

Getting to Know You

## PREPARED BY

Herald Douglas, April McLauchlin, Nicole Hesson

## GOALS

Gathering information about students' interests in science and science research

## OBJECTIVES

Scholars will complete a survey indicating scientific interests

Scholars will contribute ideas to the scientists curriculum

## ACTIVITY

The scholars will be given the attached survey form and asked to circle projects that are of interest to them. There is also a portion of the survey that allows the students to give their own ideas about a project that be of interest to them. While students are completing the survey, they will contribute to a discussion about topics related to their course that they want to learn more about. This will help the scientists tailor the activities to the interests of the students. In addition, it will give the scientists a chance to get to know the students' names and interests.

## MATERIALS

Survey (provided)
